Product description:

The HÅG Futu series is designed to provide both comfort and style in a variety of settings. Featuring the advanced HÅG inBalance® movement mechanism, these chairs ensure continuous, balanced movement, promoting better posture and comfort throughout the day.

One of the standout models is the HÅG Futu mesh, which boasts a breathable, transparent backrest that maintains coolness and ventilation. This chair also offers the option of fully functional lumbar support, as well as adjustable armrests in height and width. The FutuKnit™ mesh fabrics are specially developed to retain their tautness and are available in seven attractive colors, ensuring a sleek and modern aesthetic. Users can choose between Standard or Extended fabric for the seat.

For those seeking additional support and warmth, the HÅG Futu solid backrest model is an excellent choice. It includes an integrated, adjustable lumbar support, enhancing comfort and support for the back. Like its mesh counterpart, it features the HÅG inBalance® mechanism and uses high-quality FutuKnit™ fabrics, available in the same range of colors. Optional adjustable armrests and fabric choices for the seat provide further customization.

The HÅG Futu mesh communication chair, ideal for meeting rooms and visitors, features the same breathable backrest as the mesh model. It is designed with a 4-star base and includes adjustable seat height and depth, catering to individual preferences. This model also benefits from the HÅG inBalance® mechanism, and offers the same fabric options and optional armrests as the other chairs in the series.

Cut-off criteria:

All major raw materials and all the essential energy is included. The production processes for raw materials and energy flows with very small amounts (less than 1%) are not included. These cut-off criteria do not apply for hazardous materials and substances.

Allocation:

The allocation is made in accordance with the provisions of EN 15804. Incoming energy and water and waste production in-house is allocated equally among all products through mass allocation. Effects of primary production of recycled materials is allocated to the main product in which the material was used. The recycling process and transportation of the material is allocated to this analysis.

Data quality:

Specific data for the product composition are provided by the manufacturer. They represent the production of the declared product and were collected for EPD development in the year of study. Background data is based on registered EPDs according to EN 15804, Ostfold Research databases, ecoinvent and other LCA databases. The data quality of the raw materials in A1 is presented in the table below.

1. The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator
2. This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

GWP-IOBC: Global warming potential calculated according to the principle of instantaneous oxidation. In order to increase the transparency of biogenic carbon contribution to climate impact, the indicator GWP-IOBC is required as it declares climate impacts calculated according to the principle of instantaneous oxidation. GWP-IOBC is also referred to as GWP-GHG in context to Swedish public procurement legislation.
