### Functional unit:

OFFECCT Hanger

### General information on verification of EPD from EPD tools:

Independent verification of data, other environmental information and the declaration according to ISO 14025:2010, § 8.1.3 and § 8.1.4. Individual third party verification of each EPD is not required when the EPD tool is i) integrated into the company's environmental management system, ii) the procedures for use of the EPD tool are approved by EPDNorway, and iii) the process is reviewed annually. See Appendix G of EPD-Norway's General Programme Instructions for further information on EPD tools.

### Verification of EPD tool:

Independent third party verification of the EPD tool, background data and test-EPD in accordance with EPDNorway's procedures and guidelines for verification and approval of EPD tools.

## Product

### Market:

Worldwide

### Product description:

The concept for Neri&Hu's Hanger is to create a new kind of furniture for people who like to hang their garments and accessories out in the open in a room, in plain sight, rather than concealed in a closet or wardrobe. It is a sign of respect for the garments, but also motivated by hygienic reasons — to air the garments out after a day's wear in, for example, a hotel room.

### Product specification

Available for the United States market. Frame and hooks in black texture lacquer, foot in black concrete, black leather straps

## LCA: Calculation rules

### Declared unit:

1 Pcs OFFECCT Hanger

### Cut-off criteria:

All major raw materials and all the essential energy is included. The production processes for raw materials and energy flows with very small amounts (less than 1%) are not included. These cut-off criteria do not apply for hazardous materials and substances.

### Data quality:

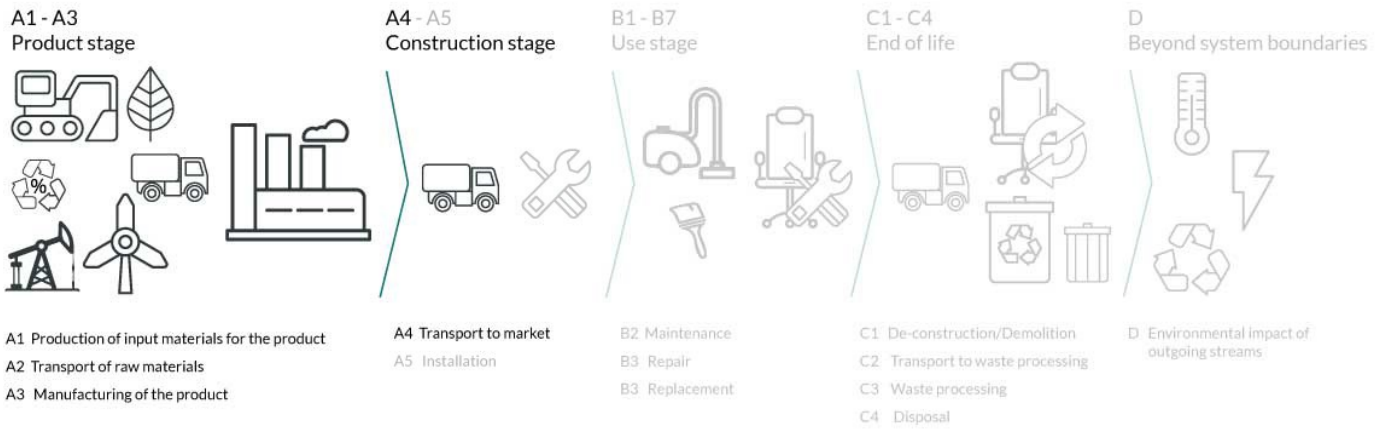

Specific data for the product composition are provided by the manufacturer. They represent the production of the declared product and were collected for EPD development in the year of study. Background data is based on registered EPDs according to EN 15804, Ostfold Research databases, ecoinvent and other LCA databases. The data quality of the raw materials in A1 is presented in the table below.

### Allocation:

The allocation is made in accordance with the provisions of EN 15804. Effects of primary production of recycled materials is allocated to the main product in which the material was used. The recycling process and transportation of the material is allocated to this analysis.

| Materials                                   | Source           | Data quality | Year |

## Additional Norwegian requirements

### Greenhouse gas emissions from the use of electricity in the manufacturing phase

National production mix from import, low voltage (production of transmission lines, in addition to direct emissions and losses in grid) of applied electricity for the manufacturing process (A3).

| Electricity mix                    | Data source   | Amount  | Unit          |
|------------------------------------|---------------|---------|---------------|
| Energy, electricity, Poland: 1 kWh | ecoinvent 3.6 | 1099,70 | g CO2-ekv/kWh |

### Dangerous substances

The product contains no substances given by the REACH Candidate list or the Norwegian priority list.

### Indoor environment

## Additional environmental information

Key environmental indicators for variants for this EPD: Cradle to Gate analyse from A1 to A3

| Variant number | Global warming (kg CO2) | Total energy use (MJ) | Share of recycled material in product(%) |
